2MP Mini-Dome — Quick Start Guide

TYCO Illustra Essentials Gen4 2MP Mini-Dome • Model IES02-D10-OI04

Before you begin

Confirm that the camera and mounting accessories are available. The camera is intended for professional installation. Follow local electrical and network installation requirements.

1. Mounting

Use the supplied mounting guide to mark the mounting points. Drill and anchor the mounting surface as required, route the camera cable, and secure the camera body firmly. Keep the lens and dome surface clean during installation.

2. Power and network

Connection	Reference
PoE	Connect the Ethernet cable to a compatible PoE network device.
12V DC	Connect the camera to an appropriately rated 12V DC supply.
Network	Use DHCP or the site-approved static IP configuration. Confirm network reachability before final mounting.

3. Initial camera setup

Open the camera's web interface or configure it through the approved VMS/discovery workflow. Change administrator credentials, set the correct time and time zone, and verify the assigned IP address.

4. Image setup

Confirm the 1920 × 1080 stream, frame rate and codec requirements. Verify True Day/Night and IR operation in low light. Use WDR where strong backlighting is present. Enable corridor mode when the camera is installed in a narrow vertical viewing area.

5. Final installation check

Check field of view, focus, day/night transition, IR, WDR, network connectivity and recording before handover. The fixed 2.8mm lens is factory focused for fast installation.

Important

This quick-start document is a condensed reference based on manufacturer-published information. For detailed installation and configuration procedures, use the full manufacturer documentation.
